SUMMARY

Economics Ph.D. candidate with expertise in causal inference, machine learning, and large-scale behavioral data analysis. Skilled in applying econometric methods and predictive modeling to complex datasets. Strong interest in consumer behavior, demand forecasting, and supply chain optimization. Seeking Data Scientist roles in Berlin, Germany (available **June 2026**).

SELECTED WORK EXPERIENCE

Ph.D. Candidate in Economics

September 2021 - May 2026 (expected)

University of Gothenburg, Sweden

- Analyzed large-scale administrative datasets to investigate labor market outcomes and political participation, applying advanced causal inference methods.
- Received formal training in econometrics, microeconomics and macroeconomics theory.
- Teaching: Introduction to Microeconomics (Bachelor level).

Project Manager

October 2018 - March 2022

Appen

- Managed remote multilingual teams (50+ contributors) across multiple countries and timezones, delivering 10,000+ hours of labeled audio data for training virtual assistants.
- Implemented quality control systems and fraud detection mechanisms to ensure high-quality output across Vietnamese, English, Italian, and Portuguese datasets.
- Designed recruitment tests and performance metrics; optimized team composition based on accuracy and throughput data.
- Coordinated task assignment and workflow optimization to meet client deadlines while maintaining quality standards.

SKILLS

Programming & Tools Python, SQL, Stata, Qualtrics

Statistical Analysis Causal Inference (Difference-in-Differences, Regression Discontinuity, A/B Testing, Instrumental Variables, Structural Modeling), Machine Learning (XGBoost, Random Forest, Causal Forest)

WORK-IN-PROGRESS

The Daughter Effect on Parental Voting

Investigated whether having a daughter at first birth affects subsequent civic participation. Applied difference-in-differences methodology and identified protective paternalism as a mechanism through heterogeneity analysis across neighborhood characteristics.

Immigrants' Voting Rights and Long-term Integration Outcomes

Analyzed the impact of early voting rights on immigrant integration outcomes using difference-in-discontinuity design. Found no significant improvement in long-term economic integration measures.

Machine Learning Models for Voter Turnout Prediction

Built machine learning models to predict individual voting behavior using Swedish population voting records. Analyzed prediction heterogeneity across geographic regions and demographic characteristics to identify key drivers of turnout.

EDUCATION

2021 - 2026 (expected)	Ph.D. in Economics	University of Gothenburg, Sweden
2024 - 2025	Visiting Ph.D. Researcher Host: Prof. Costas Meghir	Yale University, USA
2019 - 2021	M.Sc. in Economics (top 5% of cohort)	University of Gothenburg, Sweden

LANGUAGES

Vietnamese (Native), **English** (Fluent), **German** (Beginner)
